

## INTERNATIONAL RESEARCH PROJECT (IRP) PROJET DE RECHERCHE INTERNATIONALE (PRI) 2025 Call for proposals

**Closing date for applications**  
**Monday 30<sup>th</sup> June 2025 at 05:00 p.m. (Paris Time)**

### 1. Context and objectives of the programme

#### Context

In the framework of its strategic plan for 2021-2025, Inserm wishes to give strong impetus to its international relations by mobilising tools suited to the conditions and requirements of the collaboration of its research teams with their foreign partners.

International Research Projects (IRPs) or Projets de Recherche Internationaux (PRI) are consolidating tools used to meet the needs of researchers through a call for projects that is **thematically and geographically open**. The ultimate goal is to consolidate a partnership established between an Inserm laboratory in France and a foreign team (or, depending on scientific relevance, several foreign teams).

As such, the selected projects must contribute to reinforcing the European or international visibility of the scientific cooperation initiated and create the conditions for the development of larger scale research projects, for example through existing European and international funding programmes.

#### Objectifs

The IRPs aim to support an innovative and **promising partnership** by giving to scientific projects of excellence or capacity building and strong impact potential, the means to establish their collaboration over the long term. The creation of an IRP must demonstrate **complementarity between the teams and reciprocal added value for the partners involved**.

#### Duration of the projects and schedule of the call

The duration of these joint research projects between an Inserm research unit and one (or more) foreign research team(s) is five (5) years.

Regarding the 2025 call for proposals, it opens in April 28<sup>th</sup> and closes the 30<sup>th</sup> of June of year (n) for the creation of the IRP in 2025: year (n+1).

The evaluation will take place in autumn 2025.

The candidates will be informed of the results in January 2026. The projects will immediately start in 2026.

### 2. Application procedure

Applications must be submitted online on Eva3 Inserm Platform.

<https://www.eva3.inserm.fr/login>

Documents to download, to fill out and to upload on the Eva3 platform:

- The application form;
- A list of relevant scientific outputs of the laboratories (10 max each);
- The document of the recommendation of the Head of the laboratory

Documents to upload directly (no forms imposed)

- The CV of the French coordinator
- The CV of the foreign coordinator;
- A support letter signed by the foreign coordinator indicating, the case being, the resources that may be attributed to the project (including travel funds, human resources, etc.)

Candidates must inform their other supervising establishments ("*tutelles*"), their affiliated thematic institute and their regional office of their application.

### 3. Examination of proposals

#### 3.1 Eligibility criteria

1. The French coordinator has to be a researcher with a permanent position working in an Inserm laboratory (research unit) in France. *If at the time of the application a career change is known, the applicant must guarantee the continuation of the project and make mention of it in the appendix of the file.*
2. The submitted projects must be led by one coordinator from an Inserm research unit and one (or more) coordinator(s) from the foreign research country;
3. The application must contain all requested information (see list in section 2).

#### 3.2 Evaluation criteria

Once the eligibility of the applications validated, an independent scientific evaluation committee with the support of experts will evaluate them. The final validation/decision will be made by the executive management.

Evaluation of proposals will be based on<sup>1</sup>:

1. Scientific potential and quality of the project (scientific excellence and/or scientific utility, innovative aspect and/or originality) and quality of the team;
2. The relevance of the international collaboration (complementarity, quality of the existing collaboration, added value);
3. The expected scientific, economic, and societal impacts of the collaboration;

In case of equality, a competitive advantage could be given to disruptive and/or interdisciplinary projects. A special attention will be paid to projects with low-income or middle-income countries (LMICs)<sup>2</sup>.

For more details, please refer to the evaluation criteria table.

---

<sup>1</sup> The IRP call for proposals, in line with Inserm's policy on equal opportunities and parity, will follow the ambition and recommendations of the [plan for professional equality](#) between women and men and will pay particular attention to gender balance.

#### **4. Funding of selected projects**

The selected IRPs will be granted - beyond the resources directly mobilized by the participating laboratories – a funding of:

- €60,000 for IRPs in Europe;
- €75,000 for IRPs outside of Europe.

The projects will start in 2026. The fixed funding mainly aims to contribute to mobility, organization of meetings and field missions. Depending on the needs, it could also be used for equipment or other identified needs. It will be allocated to the Inserm laboratory in annual instalments (of €12K and €15K, respectively) based on the initial project and the mid-term assessments-reports established by the project leader and partner. Transfer of funding in year 4 will be conditional upon receipt of the mid-term financial and scientific reports (see below).

If applicable, co-financing by the foreign partner(s) or a tutelle of the laboratory may be mentioned.

#### **5. Monitoring of selected projects**

The funded IRPs will be monitored by the Department of National and Foreign Affairs, in order to evaluate the activity of the project and the impact of its funding, the following will be required:

- a short mid-term report (at the middle of year 3): 2-3 pages.
- a final report at the end of the project: 5 pages max.
